We took the submarine to study the
area around the reef, as well as some
mudflats, where we saw a lot of mudskippers (which I think were mudskippers).
After this we had a break at the beach, then went back to the boat.

Tilleggsspørsmål til nr. 5 Vannbæring.

I Tinn i Telemark har ein for eit par mannsaldrar sidan bore vatn på ei lang stong. Ein bar den eine enden over aksla, den andre enden drog ein etter seg på marka. Taret hekk på stonga bak ryggen åt den som bar (drog). Ein liten mothake på stonga gjorde at handtaket på bøtta ikkje gleid. Stonga var såpass mjuk at vatnet ikkje skvampla over. Utanom denne opplysninga kjenner ein no denne metoden berre frå Värmland i Sverige. Det kan henda at det tidlegare har vore meir vanleg å bera vatn på denne måten. Hugsar nokon i Dykkar bygd noko om det?
